5 BENEFITS OF MALE MASTURBATION

Masturbation continues to be appreciated in some societies as something immoral and harmful. In fact, it is an almost forbidden topic, which is hardly discussed in meetings and is reserved for intimate matters. Nor should we overlook some of the urban legends that circulated around male masturbation: that it caused sterility, blindness or the appearance of pimples. However, it is The technique produces pleasure and relaxation, among other things. Next, we show you the 5 benefits of male masturbation.

- **Avoid prostate cancer**

Prostate cancer is the most common type of cancer among men over 70 years of age. In fact, it is increasing, as shown by the fact that it already accounts for 12% of new cancer cases detected in Europe.

Various research has revealed that frequent emptying of the prostate gland, something that is obtained through ejaculation, can prevent the appearance of prostate cancer. Some studies claim that those who masturbate more than five times a week have a 30% lower chance of developing a prostate tumor.

- **Natural relaxant**

The most common options to relax are lime blossom, reading, yoga or even pills. But thanks to masturbation we can also obtain this quality, in addition to allowing us to end insomnia. When reaching orgasm, the man's brain secretes hormones such as serotonin and oxytocin, which are associated with sleep.

- **More fertility**

Contrary to what is often thought, masturbation does not affect the quality of semen. Quite the opposite, since what it actually achieves is improving the mobility of sperm. This is so since through ejaculation the residual sperm are released, making the new ones that come out healthier and younger.

- **Infection prevention**

With each ejaculation, bacteria are expelled. Therefore, the ejaculatory ducts are cleaned, preventing an infection from developing. But in addition to noticing it in the genitals, you will also notice it in other areas of the body.

- **Increases happiness**

With masturbation we secrete a series of hormones such as dopamine and oxytocin, which are associated with levels of happiness. The brain circuits of satisfaction are activated, improving mood and happiness.
