## ELECTRASTIM - CONDUCTIVE GEL

Price	<b>21.68 Euro</b>
Number	<b>70140956</b>
Producer code	<b>FETISHID-227129</b>
EAN	<b>609224031472</b>

### Product description

ElectraStim electroconductive gel has been specially formulated for use with our external electrodes. Using just a little of this clear gel will improve conductivity so you'll feel more sensation during play. Use just a little to lubricate cock rings, pinwheels, clamps and other estim sex toys designed for external use.

Just apply a pea-sized amount to the external portion of the toy that will touch the skin before you connect your electrode to your stimulator.

Each 60ml tube will last a long time as only a little gel is required to feel the effects.

What is electro-conductive gel?

Get the most out of your external electrodes with this tube of conductive gel. Apply just a little to cock rings, scrotal bands, pinwheels, paddles, clamps and other external electrodes to experience clearer, more resonant stimulation.

When external electrodes are used without a special conductive gel, you may experience dulled sensation or no sensation at all! This gel contains a conductive ingredient that creates a better connection between your skin and the electrode.

Each tube contains 60ml of clear gel lubricant, providing you with dozens of uses. A little really does go a long way. You only need to apply a small film of electro-conductive gel to the contacts of your electrode for it to take effect.

For external use only.

Ingredients: Aqua (water), Potassium Chloride, Sodium Carboxy Methyl Cellulose, Glycerin, Ethyl Hydroxybenzoate, Ethanol.
