Producer code	FETISHID-227136
EAN	609224030994

Product description

ElectraStim SensaVox is one of our most advanced and powerful stimulators, jam-packed with tantalising features and packed into a sleek, high-end design. If you want a performance e-stim power box that offers more ways to play then you'll love this dual-channel electro sex machine.

Create your own stimulation patterns using music or using voice commands to control the rhythm, intensity and duration of stimulation for a sexual experience that's truly customisable. The louder the sounds, the stronger stimulation feels. You can also control the stimulation the classic way, with the tactile knob controls that are responsive even in the heat of the moment.

Independently controlled dual channels allow you to select different intensities to complement any electrode. Use up to 4 uni-polar or 2 bi-polar electro sex toys at once and lose yourself to the thrilling sensations only electro play can provide.

99 intensity levels make SensaVox our most powerful and responsive stimulator, giving you maximum control over the sensations you feel. As well as the audio-controlled options there are 9 pre-programmed patterns, that can be modified to suit your desires.
