

JAMYJOB - ASS EXPERIENCE MASTURBATOR

Price	12.36 €
Number	70145918
Producer code	FETISHID-222077
EAN	8435565908782

Product description

The Jamyjob Masturbator

Jamyjob Toys presents three masturbators perfect for solo use, with a partner, or to take with you anywhere. Made of TPR, they enhance the sensation of pleasure, increasing well-being during male masturbation.

Instructions for use:

Before use, apply a paraben-free, water-based lubricant such as Waterfeel or Nina Kikí.

After use, if ejaculation did not occur inside, clean it with pH-neutral soap and warm water. If ejaculation occurred inside, remove the sleeve, place it under running water, and clean it with pH-neutral soap. Leave it to dry. Dry it and it will be ready for use again.

- Anus Shape
- Material: Phthalate-free TPR

5 BENEFITS OF MALE MASTURBATION

Masturbation is still viewed in some societies as immoral and harmful. In fact, it's almost a taboo subject, rarely discussed in social gatherings and reserved for private matters. We also shouldn't overlook some of the urban legends that circulated about male masturbation: such as that it caused sterility, blindness, or acne. However, this technique produces pleasure and relaxation, among other things. Below, we show you the 5 benefits of male masturbation.

- **Prevents prostate cancer**

Prostate cancer is the most common type of cancer among men over 70. In fact, it is on the rise, as evidenced by the fact that it already accounts for 12% of new cancer cases detected in Europe.

Various studies have revealed that frequent emptying of the prostate gland, which is achieved through ejaculation, can prevent the onset of prostate cancer. Some studies claim that men who masturbate more than five times a week have a 30% lower chance of developing prostate cancer.

- **Natural Relaxant**

The most common ways to relax are chamomile tea, reading, yoga, or even pills. But masturbation can also provide this quality, as well as helping to combat insomnia. When a man reaches orgasm, his brain releases hormones like serotonin and oxytocin, which are associated with sleep.

- **Increased Fertility**

Contrary to popular belief, masturbation does not affect semen quality. Quite the opposite, in fact, as it actually improves sperm motility. This is because ejaculation expels residual sperm, ensuring that the new sperm released are healthier and younger.

- **Prevention of infections**

With each ejaculation, bacteria are expelled. Therefore, the ejaculatory ducts are cleaned, preventing the development of an infection. But in addition to noticing it in your genitals, you'll also appreciate it in other areas of your body.

- **Increases happiness**

With masturbation, we release a series of hormones such as dopamine and oxytocin, which are associated with happiness levels. The brain's pleasure circuits are activated, improving mood and happiness.

Use **Jamyjob** frequently to improve your sexual performance!
