5 BENEFITS OF MALE MASTURBATION

Masturbation continues to be appreciated in some societies as something immoral and harmful. In fact, it is an almost forbidden topic, which is barely discussed at meetings and is reserved for intimate matters. Nor should we overlook some of the urban legends that circulated around male masturbation: as it caused sterility, blindness or the appearance of pimples. However, this technique produces pleasure and relaxation, among other things. Next, we show you the 5 benefits of male masturbation.

Avoid prostate cancer

Prostate cancer is the most common type of cancer among men over 70 years. In fact, it is increasing, as it shows that it already accounts for 12% of new cancer cases detected in Europe.

Different investigations have revealed that frequent emptying of the prostate gland, something that is obtained through ejaculation, can prevent the onset of prostate cancer. Some studies say that those who masturbate more than five times a week have 30% fewer options to end a prostate tumor.

Natural relaxing

The most frequent options to relax are tila, reading, yoga or even pills. But thanks to masturbation you can also obtain this quality, in addition to allowing us to end insomnia. Upon reaching orgasm, the brain of man secretes hormones such as serotonin and oxytocin, which are associated with sleep.

More fertility

Contrary to what is often thought, masturbation does not affect semen quality. Quite the opposite, since it actually succeeds in improving sperm motility. This is so because through ejaculation the residual sperm are released, making the new ones that come out healthier and younger.

Infection prevention

With each ejaculation the bacteria are expelled out. Therefore, the ejaculatory ducts are cleared, preventing an infection from developing. But in addition to noticing in the genitals, you will also appreciate it in other areas of the body.

Increases happiness

With masturbation we secrete a series of hormones such as dopamine and oxytocin, which are associated with happiness levels. The brain circuits of satisfaction are activated, improving mood and happiness.

Use Jamyjob frequently to improve your sexual performance!
