Price	**101.22 Euro**
Number	**70137550**
Producer code	**FETISHID-213408**
EAN	**4049369015030**

Product description

Our classic and elegant Pro 2 debuts our patented Air-Pulse technology, designed to excite your clitoris to true ecstasy. With a quiet motor and a soft silicone head, the Pro 2 provides the mood to reach the peak of your desire.

- Stimulates the clitoris using intense pressure waves without direct contact

Made of super soft medical grade silicone, skin friendly, soft to the touch and extremely hygienic
Thanks to its waterproof finish (IPX7), this toy can be used safely in water, as well as being easy to clean

To achieve multiple and more intense orgasms. Satisfyer Pro 2 next generation stimulates the clitoris without contact with shock waves and exciting pulsations for greater pleasure.

The new model is noticeably quieter than its predecessor. As soon as the head surrounds your clitoris, you can hardly hear anything. If you use your favorite toy in the bathtub, you will have to sharpen your ear to hear it. Something you can do without problem with the new generation Satisfyer Pro 2, as it is waterproof.

Now, slightly open the lips of the vulva and separate them to leave the clitoris clear. Position the oval head with light pressure on the clitoris so that it is in the cavity. When you have found the ideal position, you will no longer have to move the dildo.

If you want to increase the intensity, briefly press the larger, oval button. Each time you press it, the intensity will increase one level. There are 11 intensity levels you can choose from. Starting at level 11, you can slow down step by step with the larger, oval button. While the dildo is running, the LED will be continuously in the user's field.

It is incredibly cool. The product is rechargeable, allowing comfortable and cable-free handling.

Important: it must be fully charged from the first application, it is very easy with the included USB charging cable. Attach it with the two magnetic contacts at the intended and metal contact locations on the dildo. If the charging cable doesn't stick, you can connect it to the electrical circuit and wait a moment.

This will activate the magnet and the connection of the contacts will be automatically restored. During the charging process, the LED blinks. As soon as the charging process is complete, it will glow continuously.

The first charging process can take up to eight hours.
